

The Ultimate Sound!®

Audiotop Products

Our goal is to help you get more joy out of the reproduction of music. For this purpose we have performed extensive studies in the field of surfaces and contacts. Today we can offer a complete product line that improves the various interfaces between components to obtain an ideal set up both physically and acoustically. We optimize signal transmission in cable connectors as well as cleanliness and surface condition of a CD (or DVD). We have a comprehensive line of products for analog fans to clean and prepare records in order to reduce the surface noise and improve the track ability. Together with our stylus cleaner our products allow for an exceptional reproduction of recorded music.

With these Audiotop products you will achieve improve-ments in reproduction of all of your audio and video favourites. That's our promise! We guarantee products of absolute top quality and of highest purity as well as user-friendly design, dependability and to top it off an audibly more emotional reproduction of music.

Made in Switzerland, by

Audiotop Vinyl1

Audiotop Vinyl1 is a special detergent for use with vacuuming record cleaning machines. The extraordinary cleaning power is immediately audible due to the smooth and silent groove gliding and improved detail of the recorded music. To further enhance the result we recommend the after-treatment, Vinyl 2.

The improvement has to be heard to be believed and even brand-new records will profit!

Audiotop Vinyl2

An Audiotop exclusive: A fluid that reduces the friction caused by the motion of the stylus in the record groove. After applying the special fluid Audiotop Vinyl2 the diamond glides more smoothly and quietly in the record groove reducing friction and increasing stylus contact. This increases the dynamics and facilitates the reproduction of full audio frequencies and a stable output.

Now, for the first time you will hear what is really sitting in your record grooves!

Audiotop Stylus

With this special cleaner for diamond cartridges, you will achieve perfect detail, spatial imaging, focus of the music signal and a palpable recreation of the original music event.

The Audiotop Stylus is a must for demanding music listeners!

Audiotop Connect-Workstation

With the 3-piece Cleaning Set Connect-Workstation, you can reach the best standard in contact cleaning for power plug connectors, switches, rotary controllers, metal contact pins, etc

The exceptional cleaning features are: an extremely low and constant resistance across the entire audible frequency range, insensitivity to humidity and aggressive chemicals and organic solvents as well as protection from corrosion and improved wear resistance. This is especially important where only a few micron of gold coating are used. Stops the build up of corrosive matter. Temperature resistant up to 180° C (important for tubes).

With Audiotop Connect, all acoustic characteristics of your equipment are optimised. Look forward to a new audio adventure!

Audiotop Digital & CD-Marker

The Audiotop Permanent CD-Marker was specially developed for the Gläss CD-Sound-Improver. Its high-density lightproof covering yields an essential improvement of the sound quality. In combination with the cleansing agent Audiotop Digital this forms the perfect tuning for CDs and DVDs.

The result is audibly better!
